## **Because You Depend Upon Reliable Communication**

ELECTRICAL EQUIPMENT COMPANY, INC., has provided data and voice communications services to a wide variety of clients throughout Indiana. Our skilled application engineers and certified technicians design and install these important cable infrastructures to the highest standards, and we support them by certifying all cables with the newest test instruments available today. We can also provide a complete 25 year systems warranty covering the components, performance, and installation integrity of the entire structured cabling system. Strategic partnerships with different manufacturers enable us to provide top -quality products, and options to customers with specific product preferences.

Continuing education and training of our technical staff is essential to our strength in this industry and to customer satisfaction, and we strive to maintain this ability to provide up-to-date design and installation techniques so that we can achieve this goal.

Our capabilities include local area network cabling, outside plant wide area networks, network hardware, telephone systems and voicemail. Included with all of these offerings is complete testing and documentation, operations manuals and training on all of our systems.

## **Project Profile**

In July of 2001, Caesar's Indiana Resort completed construction of a 10-story, 503 room hotel. As one of the largest hotels in Indiana, Caesar's includes a variety of room options that range from basic hotel accommodations to luxury suites. While at the resort, hotel guests can take advantage of a wide variety of activities such as casino gaming, entertainment, and a future golf course.

Electrical Equipment Company installed a voice and data cable infrastructure, video cable for the hotel television system, and an audio paging system throughout the hotel.

The video system comprises of over 550 outlets and is attached to a high-tech digital video-on-demand system. The "Presidential Suites" include surround sound audio and video systems and are complete with flat-screen plasma televisions in both the living areas and the bedrooms of each suite.

Over 1,750 voice and data and telephone ports were installed and are located in each guest room and suite. Each floor of the hotel contains a telecommunications closet where the cable from that floor is terminated. Each telecommunications closet is linked by multimode and single mode fiber optic cable for data circuits, and a multi-pair voice backbone cable for voice circuits.

Please contact us today for more system profiles or to learn more about how EECO can help you.
